Findings

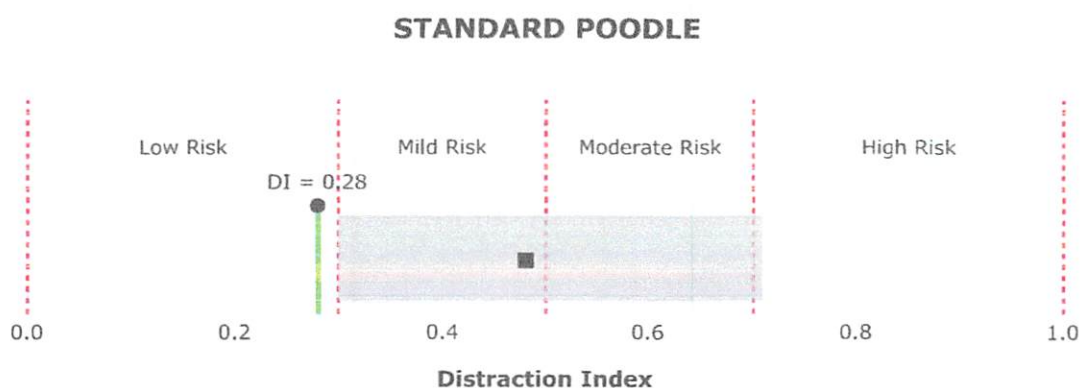

Distraction Index (DI):Right DI = 0.27, Left DI = 0.28.
 Osteoarthritis (OA):No radiographic evidence of OA for either hip.
 Cavitation/Other Findings:None.

Interpretation

Distraction Index (DI):The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.28.

OA Risk Category:The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.

Distraction Index Chart:

Breed Statistics:This interpretation is based on a cross-section of 2968 canine patients of the STANDARD POODLE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.30 - 0.71) for the breed. The breed average DI is 0.48 (solid square). The patient DI is the solid circle (0.28).

Summary:The degree of laxity (DI = 0.28) ranks the hip within the tightest 5% of DIs for the breed. This amount of hip laxity places the hip at a minimal risk to develop hip OA. No radiographic evidence of OA for either hip.

Interpretation and Recommendations:No OA/Minimal Risk: Unlikely to show radiographic evidence of hip OA; even more unlikely to develop clinical signs of hip dysplasia. **Recommendations:** Normal to strenuous activity is permitted. Keep lean: try to maintain BCS at 5/9 for a longer and healthier life.

Breeding Recommendations: Please Consult the PennHIP Manual.
